

HICKORY MIDDLE SCHOOL

Quick Response “QR” Codes

What is a QR Code?

A QR is a barcode that can be read with a smartphone camera. When the QR code is scanned by a smartphone **or** QR Reader App, it will instantly direct you to the digital content referenced by the code (Examples: website, documents, and apps). “QR” stands for “Quick Response” and many smartphones have a QR reader app already built into the camera.

- **You may also download a free QR Reader App in case your device does not have one already built in.**

How to Scan a QR code with Apple and Android Products

1. Open your camera app.
2. Focus the camera on the code.
3. At the top of the screen, there will be a notification alerting you to the source of the page. Click it and it will take you to the page.
